

NitroClean

Tech Data Information

NitroClean is a unique and complex bioremediation technology product which utilizes proprietary natural and renewable source biopolymers, biofibers, enzymes and microbial agents.

NitroClean bioremediation composite facilitates:

- Degradation of explosive residues in soils and sediments
- Introduce beneficial microbial flora and fauna at the contact area
- Degrades nitrogen compounds for removal from soil and sediment
- Product induces improved contact encapsulation in porous media
- Low-toxicity proprietary ingredients with low persistence and residence times
- For use in sediments and inland soils
- **NitroClean** is a broad range blend of microbial agents locked into a bio-polymeric matrix for precise delivery
- An encapsulating, non-ionic liquid that will effectively penetrate contaminated areas initiating microbial scavenging of nitro-chemical compounds
- Guaranteed analysis containing a minimum of 1.4×10^8 CFU
- **NitroClean** has low environmental impact during and after use and is biodegradable.
